Specification

The examiner has not checked the specification to the extent necessary to determine the presence of **all** possible minor errors (grammatical, typographical and idiomatic). Cooperation of the applicant(s) is requested in correcting any errors of which applicant(s) may become aware of in the specification, in the claims and in any future amendment(s) that applicant(s) may file.

Applicant(s) is also requested to complete the status of any copending applications referred to in the specification by their Attorney Docket Number or Application Serial Number, **if any**.

The status of the parent application(s) and/or any other application(s) cross-referenced to this application, **if any**, should be updated in a timely manner.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-12 and 15 remain rejected under 35 U.S.C. 102(b) as being anticipated by EP 0,761,708 or under 35 U.S.C. 102(a) as being anticipated by WO 99/19063.

Both EP 0,761,708 and WO 99/19063 disclose compositions comprising multimetal compounds in suspension form with at least two additional substances selected from the group consisting of water, polyether, and surface-active substances.

Art Unit: 1755

The amended claims now recite multimetal compounds with surface-active substances and at least two of water, organic complexing agent and polyether. The polyether of the references reads on the now-required surface-active substance. Accordingly, the same claimed components are present and therefore the platelet like morphology will be expected to be obtained. This is distinct from the related application referenced by applicants which was rejected over a reference employing ethylene glycol dimethyl ether which was shown by applicants NOT to be a surface-active substance. Moreover, the compositions of the reference are made in the identical manner to those of the instant examples and therefore the artisan would expect them to be identical to those being claimed herein. The intermediate product of each of the references prior to drying in the reference examples is indistinguishable from the instantly claimed suspension.

The examiner is mindful of the declaration of record. However, it does not overcome the hereinabove rejection because the compositions as claimed are identical. The applicants are not claiming a wet filter cake or the method of producing the material or a composition produced by a method that requires the steps outlined in the declaration. In fact, the declaration method appears identical to the reference methods as well with the exception of the drying step and this is not even being claimed and so does not have any weight.

If applicants wish to overcome this rejection, it is suggested that the claims be amended to require that both the polyether and the surfactant are present and they ARE NOT THE SAME.

Respons to Amendment/Argum nts

The hereinabove rejection is considered to respond to the arguments set forth in the preliminary amendment filed June 26, 2003.

Conclusion

Applicants are advised that any evidence to be provided under 37 CFR 1.131 or 1.132 and any amendments to the claims and specification should be submitted prior to final rejection to be considered timely. It is anticipated that the next office action will be a final rejection.
